Claim Listing.

This listing of claims reflects all claim amendments and replaces all prior versions, and listings, of claims in the application (material to be inserted is in **bold and underline**, and material to be deleted is in ~~strikeout~~ or (if the deletion is of five or fewer consecutive characters or would be difficult to see) in double brackets [[ ]].

Please cancel claims 1-10, without prejudice, and add new claims 11-22.

1-10. (Canceled)

11. (New) A mobile joint (1) for a seating construction for mounting between a seat device (100) of a seating construction and a support (200) for said seat device (100), comprising at least two joint elements (10,30) which may pivot reciprocally to a limited degree between two extreme positions in order to allow a tilting movement of the seat device (100), effected by the users weight displacement, characterized in that it contains a first joint element (10) mounted in a first end to the support (100) and in a second end only mounted pivotal to a first end of a middle joint element (20) in a first rotational axis (40), and further containing a second joint element (30) mounted in a first end to the seat device (200) and in the second end only mounted pivotal to a second end of the middle joint element (20) in a second rotational axis (50), wherein the said rotational axes (40, 50) are horizontally displaced in relation to each other, and whereby the joint (1) may assume a stable tilting position between the two extreme positions.

12. (New) The mobile joint (1) of claim 11, characterized in that the middle joint element (20) consists of a number of joint sub-elements, wherein the mobile joint (1) may take a number of additional stable tilting positions between the two extreme positions.

13. (New) The mobile joint (1) of claim 11, characterized in that the horizontal distance between the rotational axes (40, 50) is about 5-15 cm.

14. (New) The mobile joint (1) of claim 13, characterized in that the horizontal distance between the rotational axes (40, 50) is about 6-10 cm.

15. (New) The mobile joint (1) of claim 11, characterized in that the tilted positions are restricted by reciprocally cooperating fitting surfaces (12, 21; 14, 23; 33, 22; 35, 26) between the joints.

16. (New) The mobile joint (1) of claim 15, characterized in that one or both of the cooperating fitting surfaces (12, 21; 14, 23; 33, 22; 35, 26) are equipped with rotational stoppers (13, 24, 34, 36).

17. (New) The mobile joint (1) of claim 11, characterized in that at least two of the joint elements (10, 20, 30) are spring-loaded in relation to each other.

18. (New) The mobile joint (1) of claim 17, characterized in that the spring-load is created by a torsion spring, a spring coil, a plate spring, or an elastic material.

19. (New) The mobile joint (1) of claim 18, characterized in that the spring-load is created by a torsion spring.

20. (New) The mobile joint (1) of claim 17, characterized in that the spring load is adjustable.

21. (New) The mobile joint (1) of claim 17, characterized in that the first and second joint elements (10, 30) have different spring-loads in relation to the middle joint element.

22. (New) The mobile joint (1) of claim 1, characterized in that at least two joint elements (10, 20, 30) may be locked in relation to each other.

23 (New) A chair comprising a seat device (100), a base (200) and a mobile joint (1) connecting the seat device (100) with the base (200), characterized in that the mobile joint (1) is designed according to one of claims 11-21.
